INSTRUCTIONS ON LAWN BUILDING AND MAINTENANCE

Early fall is one of the best times to make a new lawn, principally because of ample rainfall, continued cool weather and the killing of weed seed. Locally, however, early spring (March and April), because of sufficient rainfall and enough cool weather to give young grass a quick start, is considered equally good.

PREPARATION

For a successful lawn, at least 2 to 4 inches of good quality topsoil possessing the proper organic matter and plant foods for a sturdy growth of grasses is necessary. A good lawn fertilizer for this purpose is bonemeal, which is high in phosphate and should be used at the rate of 2 to 4 lbs. per 100 sq. ft. In addition, a 1-inch layer of well-rotted manure will supply sufficient organic matter. Spread and then spade the above mixture about 4 to 6 inches deep. After being completely broken up and thoroughly mixed, the ground should be raked and rolled. Now you have a good seed-bed prepared.

OLD LAWNS

Thin turf and bare spots on old lawns may be raked so that existing grass is not damaged, and then seeded as though making a new lawn. You may also broadcast seed on a late snow in spring. The snow will carry the seed into the open ground.

SOWING

Sow at the rate of 1 lb. to 200 sq. ft., broadcasting half the seed in one direction and the other half at right angles. Carefully rake making sure not to "bunch" the seed. Roll only if the weather is dry; if you start watering, keep it up. Otherwise seed may sprout and die off before it has rooted. For a good lawn stand this is important. Do not cut before grass is 3 inches high, and set mower to leave a stand of 2 inches.

FERTILIZING

Whether you start the lawn in fall or spring, ample applications of fertilizers have many advantages. Fertilizer forces growth and helps crowd out crabgrasses and weeds. Because of better root strength, the grasses can more easily survive hot dry summer weather. Apply most fertilizers when the grass is dry, at the rate of 2 to 4 lbs. per 100 sq. ft. Established lawns should be fertilized at least once every two years.

ROLLING AND WEED CONTROL

After the frost is out of the ground it is extremely necessary to roll your lawn. Do this while it is still wet but not soggy; this helps to put the grass roots back where they belong.

Every spring we are asked, "How can we get rid of crabgrass, dandelions and most other lawn weeds?" Of course, one of the best ways is to have a good heavy turf, fertilized early, kept seeded so there will be *no place for weeds to grow*. However, when the above obnoxious weeds do appear, it is advisable to use chemicals such as 2,4-D. The presence of moss does not necessarily mean the soil is acid; usually it is the result of less fertility. Apply nitrate of soda (1 lb. per 100 sq. ft.) for this condition.

A Selection of the Finest Grasses and Field Seeds . . .

FIELD GRASSES

ITALIAN RYE GRASS. Ideal to sow in the fall on crabgrass-infested lawns; it will quickly make them green.

BLUE GRASS, FANCY KENTUCKY. Extra fine, thoroughly re-cleaned. Sow 3 to 5 bushels per acre on lawn; 2½ to 3 bushels on pasture fields. 14 lbs. to bus.

TIMOTHY. Sow ½ bushel per acre alone; with clover, 1 peck. 45 lbs. to bus.

PERENNIAL RYE GRASS. This makes quickest returns in growth of any grass; deep rooted, readily established. Sow 2½ bushels per acre. 20 lbs. to bus.

RED FESCUE, CREEPING. A splendid grass for golf links, tennis courts, etc. Will resist droughts. Sow 8 pounds to 1000 square feet.

ORCHARD GRASS. For early pasturing this is very desirable; also fine for sowing in shady places. Sow 40 pounds per acre. 14 lbs. to bus.

RED-TOP, FANCY RE-CLEANED. This is one of the best grasses for sowing for immediate effect. Free from chaff; absolutely pure. Sow 40 pounds per acre. 32 lbs. to bus.

COWPEAS. Valuable as a fodder plant. Its chief value, however, is as a green crop to plow under. Seed should not be sown till ground has become warm. Sow 2 bushels per acre broadcast, 1 bushel in drills.

ALFALFA. Needs well-drained, fertile soil and adequate lime. Requires 1 to 2 tons of manure or 300 to 400 pounds of commercial fertilizer per acre. Seed inoculation is advisable. Sow 24 to 30 pounds per acre broadcast or 15 to 25 pounds drilled.

RYE GRASS. Used as an annual hay crop, in temporary pastures and as a cover crop. Broadcast 25 to 30 pounds per acre (slightly less if drilled) in April or early September.

MAPLE PERMANENT PASTURE. Grasses and clovers adaptable to Maryland and other Northern States. Sow in early spring or fall, 25 to 40 pounds per acre.

SOYA BEAN, MAMMOTH YELLOW AND WILSON BLACK. Does not make good hay, but is good for ensilage or green fodder. Sow 1½ bushels per acre alone or ½ bushel with 1 bushel cowpeas. Yields as high as 20 tons of green feed per acre.

SAND, WINTER OR HAIRY VETCH. Thrives on poor, arid, sandy soils. May be sown in either fall or spring, mixed with rye for a support. Grows 3 to 4 feet high; can be cut as soon as bloom appears and again for seed. Sow 20 to 40 pounds per acre.

DWARF ESSEX ENGLISH RAPE. Excellent for sheep and hog pasture and chicken yards, also for soiling. Can be sown in May and will be ready for pasturing in July. In drills, sow 5 pounds to the acre; broadcast, 10 pounds to the acre.

Clover Seeds

RED CLOVER. One of the most valuable farm crops for pasture, hay or turning under for green manure. Requires deep, rich soil and yields two hay crops in a season. Sow 15 pounds per acre.

SAPLING CLOVER. Grows larger and lasts longer than common Red Clover. Valuable for plowing under. Sow 10 pounds per acre.

CRIMSON OR GERMAN CLOVER. Erect annual, 1 to 2 feet high, with bright scarlet flowers. Largely grown for improving soil by turning under. Valuable crop for pasturage or green manure. For hay, it should be cut when in full bloom. Sow 20 pounds to the acre.

WHITE SWEET CLOVER. Valuable for soiling and for ensilage and bees. Grows from 3 to 5 feet high. Sown in rich soil, may be cut three times. Lasts for years if cut before flowering. Hulled seed.

NOTE Because of market fluctuations, we are unable to quote current field seed prices. Call our Garden Shop for latest available quotations.

Field Corn

Hybrid Corn increases the yield 15 to 25 percent, is resistant to smut, rust and wilt, has deeper and more vigorous root systems and therefore is less affected by drought or severe wind.

U. S. 13. 100 to 110 days.

Well adapted to this area and still the standard variety for comparing other hybrids. The deep green plants are tall, with medium high ears. Ears are large, carrying 20 to 22 rows of deep rich yellow, medium soft grains. One of the highest yielding of all hybrids for both grain and silage.

GOLD LINE 3 8. 115 to 120 days. Dependable main-crop variety somewhat resembling Reid's Yellow Dent. Ears 10 to 12 inches long, having 20 rows of rich golden yellow kernels. The sturdy fodder stays green while the ears mature, making it an excellent silage variety. Very strong root growth.

Hardy Perennial Flower Seeds

A lovely perennial border for your garden is a "must"—and with these dependable seeds you can make yours a stand-out, using your own ingenuity and originality for color and flower variety! Remember to start perennial seeds as early as possible, preferably around the middle of April, to develop hardy plants which will bear the winter's rigors. Protect your perennial seedlings through the winter months with a covering of light mulch. If you want your border to bloom this year, we suggest you buy the plants. Most varieties will be available in our Garden Shop at moderate prices. (See pages 16 and 17.)

Use Purina Chows and Sanitation Products with Confidence

You won't go wrong buying feed in the Checkerboard bag. Backed by more than a half century of feed-manufacturing experience and continually tested and proved at Purina's big research farm, Purina Chows are always built for top results.

3 GREAT FEEDS

START 'EM RIGHT—GROW 'EM RIGHT TO LAY RIGHT

HOG FATENA

Has a reputation for building pork and profits for feeders. It's a complete feed.

OMOLENE

Put that bloom of condition on your horses. A variety of ingredients keeps them eagerly on feed.

CHICK STARTENA

It takes only 2 pounds of famous Chick Startena to get chicks off to a flying start. It's the country's largest-selling chick starting feed.

CHICK GROWENA

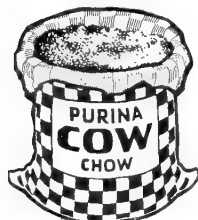

A complete feed for growing birds; in mash or checker form. Growena birds lay earlier and heavier than those on straight grain.

LAYENA

A complete feed in mash and checker form. Gives birds all they need for lots of high-quality eggs.

ALSO AVAILABLE IN CHECKERETTE FORM

COW-CHOW CHECKERS

Feed a quart night and morning on top of your regular ration, for top milk production.

RABBIT CHOW CHECKERS

CHICKS, FENCE

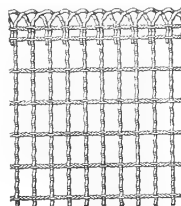

KEYSTONE FENCE, BARBED WIRE, NETTING, GATES AND POSTS

ORNAMENTAL LAWN FENCE

STYLE K

The most popular lawn fence for front yards, back yards or division fence. Pickets are of No. 9 heavy galvanized wire spaced 3 inches apart at top, 1 3/4 inches apart at the bottom. Cables spaced 6 inches apart, except the two top ones, which are 2 3/4 inches.

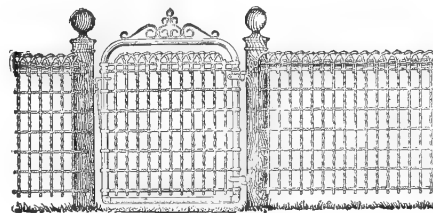

STYLE L

A moderately priced Fence. Specially adapted for back yards and division fencing. Pickets are No. 9 heavy galvanized wire spaced 3 inches apart. Cables are of heavy galvanized wire spaced 6 inches apart, except the two top ones, which are 2 3/4 inches. Comes in rolls 100 and 165 feet in length, 36, 42 and 48 inches high.

KEYSTONE POUSTRY NETTING

is the finest quality obtainable. Easy to handle. Comes in 150-foot rolls. 12 to 72 inches high; 1, 1 1/2 and 2-inch mesh. Galvanized before weaving.

WALK AND DRIVE GATES

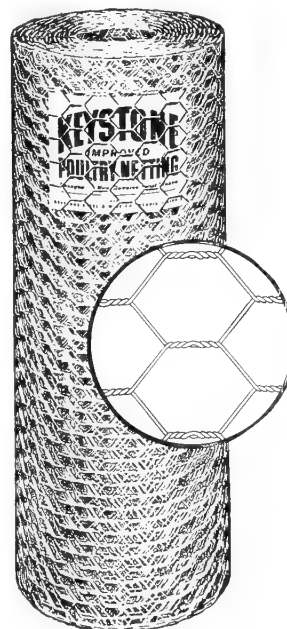

WALK GATES

to match fabric at left are obtainable with or without scroll top. The frames are of 1 1/2-inch heavy steel tubing, galvanized and equipped with hinges and spring latch for wood posts. Steel post attachments slightly extra. 36, 42 or 48 inches high, for either 3, 3 1/2 or 4-foot openings.

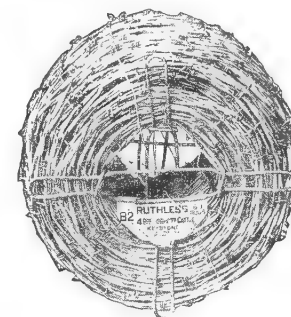

DRIVE GATES

To match K or L styles in same heights for 8, 10, 12, 14 or 16-foot openings.

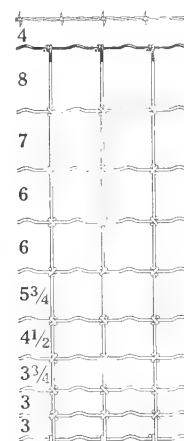

RED-TOP STEEL POSTS

are four-way reinforced for strength and stiffness. 5, 6, 7 foot lengths.

KEYSTONE BARBED WIRE

Made from copper bearing open hearth steel, is galvanized. This is an improved process that guarantees longer life and rust resistance.

FIELD AND STOCK FENCE

Made of best-grade galvanized wire. The horizontal wires and stay wires are held together with the Square Deal knot, which absolutely prevents slipping but allows the flexibility necessary to fit hills and hollows without buckling. 32 to 47 inches high, packed in 20-foot rolls.

FERTILIZERS and FOOD for FARM and GARDEN

Tri-ogen Rose Food

Contains the three basic plant foods, nitrogen, phosphorus and potash in both organic (long lasting) and inorganic (quickly available) forms, fortified with hormones and B-Complex vitamins; and, in addition, the essential minor elements such as boron, iron, magnesium, etc. Tri-ogen Rose Food out-performs all others on the market today. It is economical: 2 to 4 lbs. to 100 sq. ft. (25 plants). The first application is made when roses are uncovered from dormancy and the second after the first profuse blooming period is over. 5 lbs. \$1.00; 10 lbs. \$1.60; 25 lbs. \$3.00; 50 lbs. \$5.00; 100 lbs. \$8.50.

AGRICO FOR LAWNS, TREES AND SHRUBS

Keep a lawn in good condition by feeding it with Agrico every spring and fall. Use Agrico in rebuilding lawns too and for feeding your trees and shrubs. Use 30 lbs. per 1000 sq. ft. 5 lbs. 45c; 10 lbs. 80c; 25 lbs. \$1.60.

AGRICO FOR GARDENS

Use this special-purpose Agrico for flowers of greater health and beauty and for larger yields of vegetables, richer in minerals and vitamins. Use 40 lbs. per 1000 sq. ft. 5 lbs. 45c; 10 lbs. 80c; 25 lbs. \$1.60.

ADCO. An improved compost builder which will turn waste materials such as leaves, grass clippings, weeds, vines, cornstalks, etc., into rich organic manure. A 25-lb. bag of Adco makes half a ton of splendid fertilizer. 7½-lb. pkt. \$1.15; 25 lbs. \$2.25; 100 lbs. \$8.00.

ALUMINUM SULPHATE. For rhododendrons and azaleas. 10c per lb. up to 25 lbs.; 25 to 99 lbs., 6c per lb.; 100 lbs. \$5.00.

ASPARAGUS SALT. 10 lbs. 35c; 50 lbs. \$1.25; original sack (100 lbs.) \$1.90.

FLORIBUNDA ROSES

These are bush Roses producing clusters of bloom without interruption from early summer until late frosts. They are all very easy to grow and exceptionally hardy. Besides using them in beds, plant Floribundas in the foreground of shrub borders. As a hedge, they are a fine substitute for privet and barberry. Plant Floribundas 15 to 18 inches apart and prune lightly to the desired height, removing old flower clusters and thinning out dead wood. They grow 2 to 2½ feet tall.

Any of the following, \$1.25 each; 3 of any one variety for \$3.35; 6 for \$6.50; 12 for \$12.00, unless otherwise noted. Those at \$1.50 each are 3 for \$4.00; 6 for \$7.50; 12 for \$14.00.

Bright Eyes. Cream fading to almost white.

Cecile Brunner (The Sweetheart Rose). Tiny, pale pink buds.

Fashion. Pat. 789. (New.) See color illustration on back cover. \$2.00 each; 3 for \$5.00.
